Category Name CSS Design   **Actionee** Project (Moore)

Sub Category   **Related RIDs**
Subcategory ID

Subject DCE Security Server

Description of Problem or Suggestion:

The current security policy is too weak. The security servers are currently planned to be co-located with numerous other CSS & MSS services. This means that many people will have login access to the machine, which is contrary to recommended practices for private-key based security services and physical and network isolation of security servers.

Originator's Recommendation

Isolate the security servers on a dedicated system with limited login access and no network mounted software or data.
